

LEASE TRACKER

Company Profile

The Lease Accounting and Asset
Management Software Solution

How are we different?

Secure Cloud
Solutions

Sage Business Partner

Comprehensive
Reporting

Founded by a team of dedicated accounting professionals, LeaseTracker, a proud member of the C2 Technologies Group, was designed to provide intelligent accounting solutions through the use of technology.

Whilst we take pride in providing a market-leading product, it is our core principle of exceptional service and our customer-first attitude, which sets us apart.

IFRS 16 Lease accounting

Store, manage, report on and account for all your leasing activities

The Solution

LeaseTracker offers a user-friendly cloud-based solution that allows you to capture, modify, remeasure and manage all other aspects of your lease contracts within minutes, whilst ensuring compliance with reporting standards.

Automate financial statement disclosures with a comprehensive library of reports

Reports for monthly journals, YTD figures, remeasurements, additions and terminations are all available at multiple group and reporting levels, not to mention IFRS 16 compliant disclosure notes- never prepare a disclosure note again.

House all your lease information in one central location to simplify your IFRS 16 audit process

Save critical time during audit season by providing your auditors with read-only access to your lease environment at no additional cost.

Fully supported onboarding and expert advice

Let our team of accounting professionals assist you in transitioning to our lease accounting system whilst providing you with best-practice advice.

Unlimited user licenses

Non-user-licensed based billing means an unlimited number of users within your organisation can enjoy access to the system.

Asset Management

Optimise your organisation's fixed asset management with a user-friendly, collaborative, financial and operational cloud-based solution.

The Solution

Our Asset Management Solution is the ideal platform for organisations to manage their fixed assets. From service schedules and tenant management to asset verification and a comprehensive fixed asset register, our solution is the ultimate operational and financial asset management tool.

Financial Management

- Easy-to-use fixed asset register and general ledger functionality.
- Record and monitor asset valuations and replacement values.
- Asset verification: Tag all assets and easily conduct asset counts using our dedicated Android and IOS mobile application.

Operational Management

- Tenant Management: Create and manage tenants, including billing schedules, checklists, and more.
- Asset Management: Ensure that your assets are managed effectively using maintenance schedules and service reminders.
- Project Management: Create and manage projects and sub-projects from one central platform. Define budgets, record actual spend, and conduct variance analysis, with the option to choose between maintenance and capital-based spending.

User Segregation

Unique built-in user roles which align to various permission levels help ensure that data is kept secure and access privileges are maintained in line with your firm's policies.

Onboarding

Let our team of accounting professionals assist you in transitioning to our Asset Management System whilst providing you with best-practice advice.

Hire Purchase Management

Store, manage, report on, account for all your financed assets & lending facilities.

The Solution

Our Hire Purchase Management Solution is the ideal platform to streamline the accounting and reporting for all financed assets and credit facilities.

-  **Optimise accounting & reporting**
Create and manage your finance contracts and credit facilities within a few clicks and enjoy user-friendly reports to gain key insights into upcoming payments, credit facility utilisation and maturity analysis.
-  **Automate calculations & updates for rate changes**
Calculations are built into the system, and rates are updated automatically as interest rates change, so you'll never need to prepare calculations or manually process updates for rate changes again.
-  **User Segregation**
Unique built-in user roles which align to various permission levels help ensure that data is kept secure and access privileges are maintained in line with your firm's policies.
-  **Onboarding**
Let our team of accounting professionals assist you in transitioning to our Asset Management System whilst providing you with best-practice advice.

Document Management Solution

Secure cloud storage for all your important files, supported by flexible and efficient approval workflows.

The Solution

The Document Management Solution (DMS) is a reliable, cloud-based platform that provides secure and structured information storage for all important documents and files, including customisable and secure approval workflows.

Security and Compliance

DMS ensures regular backups, is POPIA compliant, and provides secure central storage for all files and documents within any organisation.

Flexible Approval Workflows

Unique approval workflows can be created for each individual document, allowing for single or multiple levels of approval. Sequential approval workflows are also supported, meaning that the order in which files and documents are approved can be setup to align with your organisation's approval hierarchy.

Notifications & Reminders

DMS supports system notifications and reminders for all key data elements. Set up reminders for approval deadlines, contract expiries, document reviews and more.
